## DIGESTIVE HEALTH PROGRAM

### PROGRAM GUIDE

GUT.FIX<sup>SM</sup> is a nutrition & dietary supplement program designed to support your body's digestive system by following a modified elimination diet nutritional plan that eliminates certain highly-processed foods along with taking certain nutritional supplements. Responses to the GUT.FIX<sup>SM</sup> program will vary based on individual characteristics. The GUT.FIX<sup>SM</sup> program and materials are for educational use only and should not be considered or used as a substitute for medical advice, diagnosis or treatment. Participants should seek the advice of a physician or other qualified health care provider with any questions regarding personal health or medical conditions or before beginning any new dietary or nutritional supplement program. Individual results may vary. Factors such as diet, genetic makeup, overall health and physiological differences may influence results. You expressly assume any and all risks of injury relating to the GUT.FIX<sup>SM</sup> program and release Life Time Fitness, Inc. from any and all claims arising out of such.

What in the world is a GUT.FIX program?  
Here are the rules for the next 30 days.

Follow the approved and non-approved foods list, favoring the "best tolerated" foods category, as well as cooked vegetables over raw for easier digestion.

Take our GUT.FIX supplements:

- Take 1–2 Digestive Enzymes with meals
- L-Glutamine powder 1 to 3 times daily
- Multi-Pro 30B probiotic each evening

Change your mealtime habits to allow yourself to chew thoroughly and focus on your food without distraction.

Go to bed on time, treat yourself to an "unplugged" bedroom, and give yourself a chance to consistently get those 8 hours in.

Stay hydrated. Aim for half of your goal body weight in ounces of water daily, consumed mostly away from meals.

Keep your exercise routine consistent. Do not aim for increases in intensity or duration during the program.

Get adequate movement outside of exercise – 10,000 steps per day is what is recommended.

Manage your stress! It's often one of the most overlooked areas when we focus our attention on gut health. Prioritize healthy stress management habits: deep breathing, meditation, prayer, yoga, massage, tai chi, reading or gardening.

## GUT.FIX can help lay the foundation for optimizing your digestive health

Most of us do not consciously think about our gut health on a daily basis, unless we're having overt and uncomfortable gastrointestinal (G.I.) symptoms such as diarrhea, gas, constipation, or bloating. But did you know that imbalanced gut health can present itself in ways that might surprise you, including fatigue and trouble losing weight? In fact, excess fat and poor energy are two of the hallmark signs that your gut needs some TLC. Other red flags may include skin issues, joint pain, and autoimmune issues.

Your body's response to any nutrition program is predicated on how well your GI tract is functioning. Your digestive process is actually highly complex and there are many, many opportunities for things to go wrong. In the simplest terms, to have a healthy, functioning GI tract, foods must break down adequately, the lining of the small intestine must not leak and the large intestine should contain ample healthy bacteria. This process is much easier said than done. Add to that, our environment plays a role in our GI tract as well. Unfortunately, our high-stress, on-the-go lifestyles, heavy consumption of processed foods, (often high in sugar) and exposure to environmental toxins can take a toll on our gut health as well.

It's time to take back control! That's where our 30-day, game-changing GUT.FIX program comes in, providing:

- the support of quality supplements aimed at optimizing digestive function
- a heightened level of attention to our meal time habits
- a step-by-step guide to consuming a gut-friendly elimination diet

In the next 30 days, you will reboot your digestive tract by changing your diet, eating habits and adding supplementation in a strategic way to support gut health and help get the results you deserve.

You'll notice that the food plan includes both best-tolerated and moderately-tolerated foods. We recommend sticking to the best-tolerated food list for the 30 days, whenever possible. However, we recognize that different approaches are needed for different people. A more liberalized approach includes the moderately tolerated foods as well.

### **Please read this before you begin:**

It's important to realize that gut health can be incredibly complex. When switching from processed foods to real foods, a reasonable level of gas, bloating or discomfort is to be expected at first.

The GUT.FIX program addresses several of the most common factors that can disrupt optimal digestive health. However, there is a chance your symptoms are related to something the GUT.FIX kit may only provide slight relief from.

There are a number of gut health factors that you directly control, but many more that can control you, such as ulcers, gut infections and underlying sensitivities and allergies, to name a few.

The factors that commonly affect gut health that are not in your direct control often require medical attention from a licensed practitioner. Even with gut-friendly eating and mealtime habits, healing your gut may need extra attention if there are other issues wreaking havoc in your system.

We recommend working closely with a medical practitioner that is skilled in assessing digestive function and addressing treatment plans to help get to the root cause and address it to alleviate the symptoms. Make sure you check with your physician before beginning any new program.

Good luck!

We are here for you any time at [GUT.FIX@lifetimefitness.com](mailto:GUT.FIX@lifetimefitness.com).

The GUT.FIX approach is free of:

### Gluten

Essentially, gluten is a protein found in wheat, barley, and rye. Many gluten-containing grains are sources of fructans, a type of carbohydrate that can be more difficult to digest.

### Excessive amounts of added sugar

Excess sugar intake can contribute to imbalances of good-to-bad bacteria in the gut.

### Corn

Much of the corn we are exposed to comes from genetically modified organisms or GMOs, which are plants in which the DNA has been altered.

### Beans, legumes & lentils

While rich in fiber and plant-based proteins, they often cause gas and digestive discomfort.

### Eggs

A temporary elimination of eggs will help determine whether or not including eggs on a regular basis is good for your digestive system.

### Soy

Today's plentiful soy products are most often genetically modified and used in highly processed products and may be associated with changes in immune system function and skin issues. Because gut health, immunity and skin health are

closely related, eliminating soy for a short term will help determine your tolerance.

### Dairy

Because a gluten intolerance often goes hand in hand with digestive issues with dairy, doing a temporary elimination of both gluten and dairy, with a staged reintroduction, can help determine your individual tolerance to each.

### Peanut (legume)

When addressing and working toward improved overall health, it may be helpful to avoid the type of lectin found specifically in peanuts.

### Cashews, hazelnuts, & pistachios

While our best tolerated approach eliminates all nuts and seeds for 14–30 days, these three are the top ones to avoid during GUT.FIX.

### Processed vegetable oils

These oils often require an extensive amount of processing to produce, resulting in an unbalanced ratio of omega-6 fatty acids. This imbalance can ultimately have a potent impact on health.

### Alcohol & Caffeine

These are both common culprits for disruptive digestive function.

The "best tolerated," GUT.FIX approach is also free of:

### FODMAPs

This stands for "fermentable oligosaccharides, disaccharides, monosaccharides and polyols," a group of carbohydrate types that may not be completely absorbed in the digestive tract and may trigger gut distress. Garlic and onion are the top offenders.

### All nuts & seeds, including cocoa & coffee

This category of foods is a common allergen. Eliminating these items in the short term, followed by a reintroduction, is the gold standard in determining individual tolerance to specific foods.

### All grains, including gluten-free grains

Grains may be disruptive to digestive function for some people. A full elimination and reintroduction will determine your unique tolerance.

### Nightshade plants

This otherwise healthy group of plants may be a concern to those with impaired digestion. Common nightshades include, tomatoes, paprika, white potatoes, bell peppers, hot peppers, chili powders, goji berries, and eggplant.

### Fermented foods

Some of nature's best sources of probiotics, fermented foods are critical for optimal GI health. But for some people, these foods exacerbate their symptoms while working through digestive issues. However, if you find that you can tolerate sauerkraut and kim chi, please include them throughout the program.

## Focus on food

Eat sitting down, away from distractions like the phone, TV and computer

## Plate it out

Use garnishes; make your meal look good

## Be prepared

Set out silverware and other items you need at the start of your meal

## Control your portions

Make sure your portions are appropriately sized versus family-style or buffet-style portions

## More eating, less drinking

Avoid drinking large amounts of liquid at meals; avoid coffee/tea which can impact nutrient absorption

## Stop and savor

Put the fork down between bites

## Take a break

When  $\frac{3}{4}$  done with your plate of food, stop for a few minutes to see if you are still hungry

**1-2 CAPSULE(S) WITH EVERY MAIN MEAL**

Life Time Digestive Enzyme Complex helps support proper levels of stomach acid and digestive enzymes. These make the breakdown of food easier for better absorption of nutrients.<sup>†</sup>

Low enzyme levels can make it more difficult to get the nutrition your body needs and can contribute to fatigue and bloating.<sup>†</sup>

**1 SCOOP 3 TIMES DAILY IN COLD LIQUID**

L-Glutamine is an amino acid that is important for muscle repair and recovery from exercise.<sup>†</sup>

This protein building block supports the health of small-intestine cells that regulate the digestive and immune systems, and can help in treating leaky gut symptoms.<sup>†</sup>

**1 CAPSULE EVERY EVENING**

Multi-Probiotic 30B helps support a healthy balance of good bacteria in the colon, which is important to keep it functioning properly.<sup>†</sup>

The bacteria levels in your colon can become off balance due to antibiotic use, a diet high in sugar or processed foods, or from not eating enough fermentable fibers and fermented foods.<sup>†</sup>
